SmartOTDR Base Unit

New functionalities

- GPS license (to be used with a USB GPS receiver)

Improvements

- Improvement of upgrade of faceless SmartOTDR
- Improved management of 5GHz wifi USB dongle
- Improved handling of USB microscope (was sometimes slowing down the unit itself)
- Improved downgrade capability

OTDR

- FTTH-SLM (Premium): Management of unbalanced splitters
- New FTTH-SLM Base license

Improvements

- When using MSOR or CSOR format, improved management of global pass/fail information into txt, pdf and json files
- Improved automatic measurements
- Improved lock marker capability
- Improved management of SLM (in specific cases the SLM was not displayed)
- Improved measurement of the front connector
- In PDF report, no longer ORL measurement in case of fiber with no distance
- FTTA-SLM and FTTH-SLM: Addition of technician id, job id and comment on the setup
- Improved semi-automatic measurement
- When the wavelength is requested as part of the filename, when using MSOR and CSOR files using multiple wavelength, then the "ML" code is used
